The CE mark guarantees that a product is safe to use and complies with all safety precautions. CE stands for Conformité Européenne (European Conformity) and is mainly found on electronic equipment, safety equipment, construction products, and medical devices.

The glass-fork-symbol guarantees that products live up to the demands stated in the European legislation for food contact materials. The symbol is not mandatory but advised on products used for food contact.

Third-party type approval is required for all Category III personal protective equipment (PPE) products. CAT III products will be accompanied by a notified body number for the 3rd party verification of the product's safety.

The product contains latex.

The glove is 300 mm long.

The EN 388 pictogram shows that the glove is certified and approved for protection from mechanical risks. After a test, gloves are assigned values for the individual risk areas, which indicate test results for wear, blade cut resistance, tear resistance and puncture. The values are from 1-5 or 1-4, with 4 or 5 being the highest value. In the future, the cutting strength will also be divided into how many newtons the glove can withstand. This is indicated by the letters A - F, where F is the highest (3 kg+) and A is the lowest (200 - 499 grams).

The standard specifies the requirements for protective gloves against chemicals and microorganisms. Type C has been tested for a permeation time of at least 10 minutes with the chemical sodium hydroxide.

The standard specifies the requirements for protective gloves against hazardous chemicals and microorganisms. This part of the standard describes the glove's resistance to bacteria and fungi, but to viruses.
